

Instructions for making
PAVERPOL 3D EFFECT PASTE
WHITE/HARD AS STONE

You need:

Paverpol transparent, Paverplast, Paversand white/stone hard, sealable jar or bucket, spoon or wooden whisk

Mix:

Mix 100 gram Paverplast little by little with 500 gram Paverpol. Stir until you have a thick, smooth paste. Then add the Paversand, also little by little. This allows you to decide how thick you want the paste to be. The more Paversand you add, the coarser the structure. Apply the paste with your hands or plastic spatula on the workpiece. During drying, nice cracks appear.

Possibilities with Paverpol 3D effect paste white/hard as stone

The paste can be applied to Paverpol statues that are made with aluminum foil covered with masking tape. The paste also attaches to a variety of other materials such as wood, glass and pottery.

Paint:

After thoroughly drying you can paint it with acrylic- or oil painting. If you wish, the workpiece, painted with acrylic paint, can be patinated with a mix of Josefine varnish and Pavercolor brown.

A workpiece made with Paverpol 3D effect pasta white/hard as stone is outdoor proof.
